

Nicholas Seah

Data Engineer

Newtown, NSW | nseah8@gmail.com | 0488 005 421 | LinkedIn | GitHub

Overview

Solutions-oriented Data Engineer with end-to-end experience delivering data pipelines, automated reporting, and ETL/ELT solutions across multiple industries. Confident and proactive in identifying risks, driving solutions, and pushing back where necessary to ensure data quality and project success. Skilled in translating complex business problems into clear, actionable insights, with strong productivity in dashboard development, SQL/Python analysis, and cloud-based data integration. Adept at managing stakeholders and aligning technical delivery with business priorities.

Certifications & Education

2026 Completed	Databricks Certified Data Engineer Associate
2025 Completed	[PCAP-31-03] PCAP™ – Certified Associate Python Programmer
2024 Completed	Tableau Certified Data Analyst Alteryx Designer Core Certification Master of Commerce – University of New South Wales (UNSW) Major: Business Analytics SAS - University of New South Wales Academic Specialisation in Business Analytics Postgraduate
2022 Completed	Bachelor of Arts and Business – University of New South Wales (UNSW) Major: Media Minor: Global Development

Technical Skills

Programming & Query Languages	SQL, Python, JavaScript, R, M, HTML, CSS, JSON
Data Engineering & Transformation	dbt, Databricks (Spark SQL), Git/GitHub, Alteryx, VS Code, SAS Viya, Tableau Prep
Data Visualisation	Power BI, Tableau, ThoughtSpot
Cloud Platforms	Azure (Databricks, Fabric), AWS (RDS, EC2, Lambda, S3, Glue)
Databases & Management	Snowflake, Oracle DB, Microsoft SQL Server Management Studio, MySQL, Azure Data Studio, DBeaver
Data Management & Governance	Tableau Server, Power BI Service, Alteryx Server
Business Tools	Confluence, Jira, Salesforce, Microsoft 365, Miro

Professional Experience

Associate Consultant – MIP Australia Pty Ltd

Sydney, NSW | April 2024 – Present

- Completed 4-month intensive training on data analytics tools and methodologies including SQL, Alteryx, Power BI, and Tableau
- Contractor work delivering data consulting services to clients across a number of industries

Data Engineering Consultant – Deputy Group Pty Ltd (Contract)

Hybrid | September 2025 – February 2026

- Led the end-to-end rebuild of Deputy's Monthly Recurring Revenue (MRR) reporting engine (v4), redesigning the dbt transformation layer and revenue classification logic within a multi-product SaaS environment spanning 5 product suites, 17 billing editions, and multi-currency subscription data
- Redesigned and implemented 30+ dbt models across staging, transformation, and reporting layers within a 6-layer medallion architecture, establishing modular SQL patterns and clean model boundaries to support a parallel v3/v4 rebuild
- Applied structured Git feature branching and pull request workflows to isolate logic changes, enable concurrent development streams, and support controlled rollback through version history
- Supported parallel v3/v4 production pipelines (blue-green style deployment) and UAT rebuild activities, enabling stakeholder comparison, regression validation, and controlled production cutover
- Performed detailed SQL-based reconciliation and variance analysis in Databricks, resolving edge cases including snapshot deduplication, CTE ordering dependencies, rounding inconsistencies, and multi-product count overstatement
- Rewrote the revenue movement classification engine (14+ movement buckets) in collaboration with analytics stakeholders and downstream reporting users, introducing improved business rule logic and clearer revenue attribution
- Centralised 16+ hardcoded thresholds into dbt variables and implemented edition configuration seed files to enable parameter-driven business logic and reduce deployment risk
- Built a comprehensive data quality framework (70+ dbt singular tests) covering business rule validation, reconciliation logic, and boundary condition checks
- Authored technical documentation (Logic Handbook, Change Log, Data Model Catalogue) detailing metric definitions, transformation flows, and model dependencies to support long-term maintainability

Data Analytics Consultant – Pacific National (Contract)

Remote | May 2025 – June 2025

- Development and Production Tableau Server environment upgrade from their current version to the specified version agreed upon
- Collaborated in defining project objectives, identifying required features, and capturing key considerations for the testing strategy
- Designed and documented a comprehensive upgrade testing scope, including step-by-step validation checklists
- Conducted end-to-end testing across development and production environments, verifying the integrity of Tableau dashboards, databases, data sources, schedules, jobs, tasks, and user permissions post-upgrade

Data Analytics Consultant – VetPartners (Contract)

Remote | October 2024 – April 2025

- Multi-system data migration project from legacy PMS systems to Salesforce CRM via ETL processes, Alteryx workflows and custom migration logic
- Conducted data exploration, cleansing, and validation using MySQL (Amazon RDS) and SQL Server (Amazon EC2) databases, contributing to an optimized and scalable pipeline
- Automated transformation layers to ensure consistent formatting and granularity across data sources through Alteryx workflows
- Resolved data anomalies via exception reports and stakeholder collaboration, enabling successful ETL cutovers

Data Analytics Consultant – RMIT (Contract)

Remote | July 2024 – October 2024

- Supported data transformation and validation in the migration of historical datasets into Oracle Database, contributing to foundational data architecture redesign
- Created and executed SQL schema creation scripts to structure tables for downstream loading
- Used Python libraries such as FuzzyWuzzy and RecordLinkage to perform text matching and deduplication across datasets, improving merge accuracy between old and new CRM records
- Collaborated with stakeholders to ensure business continuity and accuracy throughout migration
